Previously, in Ivy applications, Hammer providers were included by default. Now presence of these attributes would trigger min/max validation logic (in case formControl, formControlName or ngModel directives are also present on a given input) and corresponding form control status would reflect that. If you are impacted by this change please file an issue. Providers only become eager if they are either directly or transitively injected into one of the above. e.g: onChange(ngModel: NgModel) { console.log(ngModel.value); // would log old value, not updated value } Now the value and validity will be updated before the ngModelChange event is emitted, so the same setup will log the updated value. 2.0.2 (2016-10-05) Bug Fixes common: correctly removes styles on IE (#11953), closes #7916 compiler: do not embed templateUrl in view factories in non-debug mode. For details on how to migrate, please refer to the deprecations guide. 2.1.1 (2016-10-20) compiler: generate aot code for animation trigger output events (#12291) (6e5f8b5), closes #11707 compiler: don't redeclare a var in the same scope (#12386) (cca4a5c) core: fix decorator default values (bd1dcb5) core: fix property decorators (3993279), closes #12224 http: make normalizeMethodName optimizer-compatible. Instead, you can import them from Angular / Upgrade / Static. He has closed session in another tab or window. Nodejs versions prior to V12.20.0 are no longer supported because angular packets use the export feature of Nodejs packets with subruta patterns. It no longer emits a 'popstate' event when it is called location.go. Compiler: The option of the enablelement compiler is now disabled by default since the element was obsolete from the V4 version. Use instead. 4.0.1 (2017-03-29) GIF animated bug fixes: Make sure that style catcles are not calculated too soon (# 15540) (c828511), close the compiler # 15507: Allow simple quotes at interpolations with name (# 15461) (A654875), closes the compiler # 15318: Skip errors when evaluating base classes (# 15560) (A88413F), close the compiler # 15536: Throw when a component defines both Template and Templateurl (# 15572) (902bb2f) , Close # 15566 Core: Check if it is not defined in normalizedEbugBindingValue (# 15503) (B8C0A97), closes the nucleus # 15494: Correct the inheritance in JIT mode for TS 2.1 (# 15599) (CA66530), closes the nucleus # 15502 : Correct the key / value difference (# 15539) (E72124C), closes the number # 15457: Improve the error message for the argument not valid (#15489) (d74e4d0), close the #15402 kernel: Update types ³ support for TypeScript (#15472) (8c4b963) language-service nullity: be resilient to invalidate orders (#15470) (a2c2b87), close #15466 language-service: correctly determine base members types (#15600) (0fe4985), closes #15460 language-service: don't require reflect-metadata module to be provided (#15569) (bfa4f70), closes #15568 language-service: guard access to Symbol.members (#15529) (bf25e94), closes #15528 language-service: improve performance of updateModuleAnalysis() (#15543) (5597fd3) router: should run CanActivate after CanDeactivate guards (75478b2), closes #14059 #15467 router: shouldn't execute CanLoad when a route has been loaded (2360676), closes #14475 #15438 Performance Improvements router: don't create new serializer every time UrlTree.toString is called (#15565) (fd61145) 4.0.0 invisible-makeover (2017-03-23) From 4.0.0 @angular/core uses a WeakMap, a polyfill needs to be included for browsers that do not support it natively. TestRequest from @angular/common/http/testing no longer accepts ErrorEvent when simulating XHR errors. Before import {XhrFactory} from '@angular/common/http'; After import {XhrFactory} from '@angular/common'; router: Strict null checks will report on fragment potentially being null. Features: you don't need to use the intl polyfill for Angular anymore. If you are broken by this release, let us know so that we can look into it right away. Introduced by (#14367) (4da7925). core TypeScript versions older than 4.4.2 are no longer supported. Release Highlights & Update instructions To learn about the release highlights and our new CLI-powered update workflow for your projects please check out the v7 release announcement. (#33729) ebf2fc5224 fix incorrectly keeping track of ngModel with ngFor inside a form (#40459) Commit Type Description 28393031b1 perf remove IE special status handling (#44354) Commit Type Description 791bd31424 feat set stricter type for Route.title (#44939) 64f837d2c0 fix Update Navigation#initialUrl to match documentation and reality (#43863) Commit Type Description 202
